Mike:

You asked if residential well water in the vicinity has been compromised.

Based on the data we have in house (We have not seen all of the data - it is in the hands of the County Health Department), with the one exception of the new well that I discussed with you, none of the residential well analyses have shown any constituents above mcl . The one exception we believe was contaminated as a result of construction materials (adhesives) used in installing the well. Samples from that well have been clearing up.

You also asked about under whose authority the adjacent LCID landfill will be monitored.

Guilford County Health Department's delegated authority includes authority to monitor that site and they have been exercising that authority. We have oversight authority, but they will be the primary authority. The county has also expressed an interest in extending their authority to C&D facilities within the county. We are waiting for formal request from the county.

I will be scheduling a visit to the site near the end of this month, at which time I would expect that they would have stopped receiving ANY waste and that all efforts would be directed toward final closure activities. (Any economic gain derived by not stopping soon enough to comply with the schedule should be forfeited to the benefit of the County Schools.)

You indicated an interest in going to the site yourself. Perhaps that would be a good time to plan a visit. I would expect that the engineer and owner would be delighted to meet with us on site and discuss any remaining concerns.

I will keep you advised of activities at the site. Let me know if you need any additional information.
